JARVIS Setup Guide

For Windows 10 and 11 · Beta 0.1.0 · by h4harshill

JARVIS is a voice assistant for your computer. You talk to it in English, Hindi or Hinglish, and it can open apps, play music, read and write email, add calendar events, send WhatsApp messages and help with what's on your screen. It always asks before it sends, changes or deletes anything.

Setup takes about 10 minutes. You need: a Windows 10 or 11 PC, a microphone (the laptop's own is fine), an internet connection and a Google account.

1. Unzip

1. Find **JARVIS-0.1.0-Windows.zip** in your Downloads folder.
2. Right-click it → **Extract All…** → **Extract**.
3. In the new folder you'll see **JARVIS-Setup-0.1.0.exe** and this guide.

2. Install

1. Double-click **JARVIS-Setup-0.1.0.exe**.
2. Windows may show a blue box: *"Windows protected your PC"*. Click **More info**, then **Run anyway**.
3. Click **Next**, choose whether you want a desktop icon, then **Install**. No administrator password is needed; JARVIS installs just for you.
4. Leave **Launch JARVIS** ticked and click **Finish**.

Why the blue box? This beta isn't signed with a paid Microsoft certificate yet, so Windows doesn't recognise the publisher. That's planned before the public launch. Only download JARVIS from the official page: **h4harshill.github.io/jarvis**.

3. First start

1. **Beta terms:** read them and click **I agree**.
2. **Gemini API key** (free; this is JARVIS's brain and voice):
    a. Click the link JARVIS shows, or open **aistudio.google.com/apikey**.
    b. Sign in with your Google account and click **Create API key**.
    c. Copy the key and paste it into JARVIS. It's stored in Windows Credential Manager, never in a file.
3. **Microphone:** if JARVIS says the microphone is blocked, click the button it shows. In Windows Settings turn on **Microphone access** and **Let desktop apps access your microphone**.

4. Connect Google (optional, recommended)

For Gmail, Calendar, Contacts and YouTube music: open **Connections** → **Sign in with Google**. Your browser opens.

1. Pick your Google account.

2. Google shows *"Google hasn't verified this app"* (normal for this beta). Click **Advanced → Go to JARVIS (unsafe)**.
3. Tick the permissions you want and click **Continue**. When the page says you can close it, go back to JARVIS.

You can add up to 5 Google accounts and choose which one each service uses. Other email (e.g. a Hostinger or Zoho address) can be added under Connections → Email.

5. Try it

Click the mic button in JARVIS and say:

"Jarvis, Chrome kholo"	opens an app
"Volume 30 kar do"	changes the volume
"Kesariya bajao"	plays a song
"Mere latest emails padho"	reads your Gmail
"Kal 5 baje meeting add karo"	adds a calendar event
"Mummy ko WhatsApp karo: main 10 minute mein aa raha hoon"	sends a WhatsApp message (after you approve)
"Mera screen dekho, ye error kya hai?"	looks at your screen once

Approvals: before JARVIS sends a message, adds an event or changes something, it shows an approval card. Click **Confirm** or say **"yes"**. JARVIS can never approve its own actions.

6. WhatsApp (optional)

Install **WhatsApp** from the Microsoft Store and log in to it once. JARVIS opens the chat with your message typed, checks it, and sends only after you approve. It never guesses a contact: if two people match a name, it asks which one.

7. Everyday tips

- JARVIS has an icon near the clock (click **^** if it's hidden). Right-click it to turn the mic on or off, or to quit.
- Settings → General: **Open at login** and **Keep running near the clock** when the window is closed.
- Something wrong or an idea? Say **"Jarvis, send feedback …"**, or use Diagnostics → **Report a problem**.

8. Privacy and safety

- JARVIS runs on your PC. Your history, memory and settings stay on this computer.
- Your voice goes to Google's Gemini to understand and answer you. Keys and Google sign-ins are kept in Windows Credential Manager.
- JARVIS looks at your screen only when you ask, and shows a notice every time.
- Full privacy policy: **h4harshill.github.io/jarvis/privacy.html**

9. Uninstall

Windows Settings → **Apps** → **Installed apps** → JARVIS → **Uninstall**.
